

# Front End Software Engineer

San Francisco, United States

Full-Time

80-110K, DOE

We're actively looking for Front End Engineers with an interest in big data for our client, an exciting start up, leading the field in social analytics. Our focus is on candidates that rise to challenges with the curiosity and mental dexterity to analyze and solve complex problems. The company is guided by a work and play ethic that reflects their core principles that social networks develop and grow from personal relationships based on respect for our colleagues and our customers. If you embrace the kinds of problems that others give up on, you'd be a great fit here.

Based out of our downtown San Francisco office, you will take the lead developing our user interface by turning basic wireframes into production code. The key challenge you will be facing is building an easy-to-use, fast, flexible, front end interface that is able to draw out key insights from visualized data. You'll develop, maintain, and optimize the performance of our customer facing dashboard in this highly visible role. For success, you'll draw on the following skills and experiences acquired to date.

- \* Experience with Javascript and major framework such as jQuery
- \* HTML and CSS knowledge
- \* Understanding of web standards and best practices
- \* Eye for great design and information architecture

Although not required, the following qualifications would add to your candidacy:

- \* Experience with data visualization
- \* Mathematical inclination and a familiarity with statistics
- \* Python & Django coding experience
- \* Flash and AS3 experience a plus

Please send resume.doc and follow up call for immediate interview to:
